

CALL SYSTEMS FOR THE HOSPITALITY INDUSTRY

Control unit

Take-away pager for calling guests

Pager for waiter

Table transmitter for waiter call

Call systems improve workflows and increase efficiency in restaurants

Pager for waiter

The benefits of a waiter call system are plain to see: it is noise-free and very easy to use. Kitchen staff enters the number of the waiter in the control unit for the call system and the waiter's pager vibrates. In contrast to the conventional kitchen bell, this system allows kitchen staff to call a specific waiter.

Take-away pager for calling guests

The system can be expanded with a take-away pager for calling guests. These pagers are particularly practical in self-service restaurants where the meals first have to be prepared fresh. Guests receive a take-away pager and can take a seat at a table while they wait for their order. When their order is ready, the pager vibrates and beeps. Take-away pagers can also be used when guests have to wait for a free table.

Table transmitter for waiter call

You can increase your operation's efficiency further, with a waiter call system for guests: Transmitters on the table enable guests to call their waiter. This system saves unnecessary travel for waiters and increases customer satisfaction, because they are served at the push of a button.

Reliable and always ready to use

The 433 MHz radio technology provides optimal radio coverage. If this is not enough, one or more repeaters can be installed. The waiter pager has a battery life of 24 hours (100 calls per hour) and a standby battery life of 175 hours.

Complete system

Thanks to its graphic display, waiters can identify the different calls not only using different vibrations but also using different icons. In addition, an acoustic signal can be activated, as well as a reminder function, that automatically repeats the call, if the waiter does not first confirm the call.

6-way charging station for pagers
